Professional Summary

Computer Science undergraduate at VNR VJiet with a CGPA of 8.4, specializing in full-stack development, automation systems, and data-driven applications. Experienced in building scalable web platforms, and AI implemented applications using Python, FastAPI, React, and PostgreSQL. Delivered production-scale academic projects involving API development, data processing, and AI-assisted analysis. Demonstrated leadership by presenting technical systems in competitive environments and collaborating in fast-paced development settings.

Education

VNR VJiet

Bachelor of Technology in Computer Science and Engineering

Hyderabad, TG

Aug 2024 – Present

- Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Object-Oriented Programming through Java, Probability and Statistics, Discrete Mathematics, Problem Solving Using C

Technical Skills

Programming Languages: Python, Java, C, SQL, JavaScript, HTML/CSS
Frameworks & Libraries: FastAPI, React, Node.js, REST API, Flutter
Databases & Data Systems: PostgreSQL, Redis, Data Analytics
AI / NLP: Large Language Models (Ollama), Prompt Engineering, Text Processing
Developer Tools: Git, Docker, Docker Compose, Google Cloud Platform, VS Code, PyCharm
Software Engineering: API Development, Debugging, Testing

Projects

IntelliCredit | AI, Python, Machine Learning, Streamlit, Pandas, REST API, Cloud 2026

- Built and deployed a production-ready AI-powered credit risk assessment platform on Streamlit Cloud, enabling real-time loan eligibility prediction through an interactive web interface.
- Developed an end-to-end machine learning pipeline for financial data preprocessing, feature engineering, and credit scoring, improving prediction reliability and model scalability.
- Integrated REST APIs with a modular backend architecture to automate financial data extraction and risk analysis, enabling seamless deployment and future model expansion.

Recovery Companion | Flutter, FastAPI, PostgreSQL, Docker, Google Cloud AI, LLMs 2026

- Developed an AI-assisted healthcare recovery platform combining a Flutter mobile application with a FastAPI backend to support post-discharge patient monitoring.
- Built a modular backend integrating PostgreSQL, Docker, and REST APIs for secure patient management, recovery tracking, and scalable healthcare workflows.
- Implemented Gemini-powered multilingual voice check-ins, computer vision-based meal analysis, and automated drug interaction detection to deliver personalized recovery insights and improve patient safety.

SIENNA – Configurable AI Chatbot System | Python, Flask, LLM APIs, Backend Development 2025

- Engineered a configurable AI chatbot using Flask and Groq LLM APIs, delivering real-time conversational responses with low-latency API integration.
- Designed customizable AI personality parameters including humor, honesty, and authority compliance, enabling adaptive conversational behavior across diverse use cases.
- Built scalable session management and modular backend services supporting persistent conversations, API orchestration, and future feature extensibility.

Activities & Interests

Competitive Programming: Solved 100+ algorithmic problems across CodeForces, CodeChef, and LeetCode, Div 3 (Rating 1538) in Codechef.

Certifications

- Power BI and Data Analysis - Infosys
- Google Cloud Certification - Google Study Jams
- AgentBlazer Champion 2026 - Salesforce
- Data Structures and Algorithms - Smart Interviews (Ongoing) •
